Do not drop. Frames are made with glass backlights and will break if dropped! Call for a repair quote if you damage screen.
888-483-2418

Care:

Frames are sensitive and require extreme care. **Use caution when hanging the frame. Get help if the frame is too heavy for you. Make sure frame is securely hung before you let go.** They are not meant for traveling without a protective case. Keep sharp objects and water away from frame. Hold the entire unit from front to back when moving. To clean, spray towel lightly with a mild window cleaner and wipe gently. Keep frame grounded and turn off during thunder storms. Plug into surge protector if possible.

- Use indoors only and keep away from heat sources & direct sunlight. Operate between 35-105 degrees F.
- frame has sharp corners and edges. Use caution when handling. hold screen by the sides not the corners.
- keep away from water sources, Mist and humid bathrooms are bad.
- keep away from small children, and people prone to epilepsy.
- keep sharp objects away from the front of the screen. When shipping: package cord to the back of screen. wrap in plastic.
- **turn unit off before taking out the USB drive (YOU MAY DAMAGE YOUR USB drive IF YOU DON'T TURN IT OFF)**
- to prolong life, turn screen off at night. Make sure it is plugged in to a surge protector or unplugged during bad weather
- Do not press or insert screws into the back of the frame. It will damage the internal electronics.
- turn off main power when going on vacation.
- Do not lose your remote control. It is needed each time you want to start your slides after power on.

Displaying your frame

The frame is the perfect size for displaying digital pictures on any wall. Point frame towards your audience for best performance. Place frame securely so it won't get knocked off or fall. Frames are designed for indoor use only. Do not to cover ventilation holes. Frame may overheat. Do not block the IR port. Line of site is needed for remote control.

Hanging your frame

To hang your frame on a wall you will need a Phillips screwdriver and level. Make sure you are near an outlet or have an extension cord. If hanging on drywall, please use the supplied wall driller hooks. Use your hanging bracket as a template. Level your bracket. Mark holes for the drywall screws. Screw the metal driller hooks into the drywall until they are all the way in. Place bracket over screw holes. Now screw the small screws inside the wall driller hooks and over the bracket. Hang frame on the bracket that is attached to the wall and plug in. Turn the power on by switching on the main power with the switch on the bottom left.

How to insert your media.

- After you've taken photos with your digital camera, you need to remove the memory card according to your camera's instructions. Save the images to your computer then place images onto your USB memory stick. Image, video and mp3 files only
- Power down your frame using the big black button on the left of the frame
 - Put your USB memory stick into the picture frame.
 - Power on the frame.

Note: The USB slot is designed to accept a memory stick only if you insert it in the correct direction. If the USB does not slide in easily, check that you are positioning it properly – do not force it into the slot. If you force the USB into the slot improperly, you will cause damage to the USB and possibly the frame and internal parts.

Power down

If you wish to conserve energy, you can power down your frame each night by flipping the switch on the left side of the frame. You can attach the power cord to a timer that will allow the frame to turn on and off automatically at specified times. The 1080p models will not Auto Start. Have your remote controls handy. The screens will want you to use your remote to start the videos or slides each time after a power shut down. It will remain on the menu screen until you select a slide show option. After this the screen will play your slides or videos continuously. Hit the repeat button.

Additional Instructions

1. All settings have been preset for the optimal setting. HDMI auto will adjust to the best screen setting. Set to 1080p 50hz
2. Pictures must be in .jpg format and movies must be .mpeg 2, or 4 720p or 1080p for best performance.
3. A good size for pictures is 1366 x 768. Any images larger than this or smaller than 800 x 600 may not show properly.
4. Save all your pictures to 1366 x 768 for the best performance.
Note: Make pictures at least 800 x 600, no smaller.
Make sure your images are saved in RGB color mode.
5. Movies need to be saved in a 16:9 ratio.
6. This frame can handle up to 249 photos at a time in network slide show mode, and can play one folder at a time. Create a video to play more images if needed **HC memory cards and USB drives may have future capacities that are not supported.
7. DO NOT lose your remote. A replacement remote can be purchased online. If your remote is not working, make sure its pointed at the left side of the frame where the IR receiver is located.
8. Ensure pictures and folders are named with number and letters only. No special characters.
9. Timing between photos can be set at 2, 5, 10, 30, 60 ,120 seconds.
10. Transition effects can be changed using the Transition setting.
11. Make duplicate files to show your images for a longer period.
12. Ensure USB drive has no other file types other than .jpg, .mpeg, or .mp3
13. Setting background music: Before viewing photos: Go to Music and play music files first.

Press  to return to the Home screen and then go to Photo to start the photo slideshow. The slideshow plays along with the background music now.

Ensure to press  instead of  while playing music files or else the background music setting will fail.

SPECIAL NOTE - NORMAL OPERATION

Please be aware that certain images may trigger epileptic seizures. Please use with caution.
